

DMart Sales Analytics

Business Intelligence & Performance Report

Prepared By: **Riya Kaldate**

Date: **May 27, 2026**

Project Overview

Objective: To improve operational performance and investigate product patterns in order to achieve high financial success.

Dataset Structure & Covered Columns

- **order_id:** Unique transaction identifier
- **region:** Geographic sector of operation
- **category:** Product categorization hierarchy
- **sales:** Gross sales transaction revenue
- **discount:** Promotional markdowns applied
- **quantity:** Unit count per order line item
- **order_date:** Operational timeline stamp
- **customer_type:** Segment classification
- **payment_mode:** Settlement method
- **profit:** Net margin realized

Key Performance Indicators (KPIs)

TOTAL SALES REVENUE \$1,250,000	TOTAL NET PROFIT \$220,000	TOTAL ORDERS LOGGED 5,200
------------------------------------	-------------------------------	------------------------------

Executive Summary Observations

- Healthy overall profitability margins averaging **17.6%** across standard retail operations.
- Order count trends indicate consistent operational volume with high re-order rates.
- Sales metrics show high volume density in core regional areas.

Sales & Profitability Analysis

Strategic Diagnostics: 5W Technique

Core Metric	Operational Mapping & Strategy
What?	Improve operational performance and execute detailed product margin analysis.
Why?	Increase overall profitability profiles and optimize localized customer satisfaction metrics.
Who?	Cross-functional management team, lead data analysts, and regional operations teams.
Where?	Regional logistics hubs and city-level localized operations center.
When?	Evaluated during continuous Monthly Management and Quarterly Financial Reviews.

SWOT Analysis Matrix

Strengths

- Strong, localized brand presence
- Robust logistical supply chain networks
- High customer frequency metrics

Weaknesses

- High baseline promotional discounts
- Compressed net profit margins on staples
- Data silos between distribution centers

Opportunities

- Expansion into Tier-2 and Tier-3 urban centers
- Advanced AI analytics dashboard integration
- Targeted high-margin private label options

Threats

- Agile digital quick-commerce competition
- Fluctuating structural supply chain costs
- Shifting consumer demographic trends

Product Portfolio Matrix (BCG)

Stars (High Growth / High Share)

Apparel & Fast-Moving Electronics

- Requires continuous inventory backing.
- Primary driver of top-line scale growth.

Question Marks (High Growth / Low Share)

Organic Foods & Premium Wellness Lines

- High development potential.
- Needs targeted marketing investments.

Cash Cows (Low Growth / High Share)

Packaged Groceries & Staples

- Generates consistent cash flows.
- Maintains fundamental business baseline stability.

Dogs (Low Growth / Low Share)

Slow-Moving Seasonal Specialty Products

- Subject to structural margin drag.
- Candidates for stock clearance and optimization.

Root Cause Analysis: 5-Why Framework

Problem Statement: Total Operational Profit is Decreasing

Why 1: High promotional markdowns and continuous category-wide discounts are being applied.

Why 2: Aggressive sales targets are currently being prioritized over net profitability yields.

Why 3: Sales team performance rewards are heavily tied to raw volume rather than margin values.

Why 4: Real-time profitability performance tracking was not accessible to regional floor coordinators.

Why 5: No advanced automated data analytics dashboard system was historically deployed.

Root Cause Identified: Absence of an Integrated, Advanced Analytics Platform

Business & Functional System Requirements

Business Requirements

Primary Goals:

- Boost net operational margin by 5% annually.
- Automate multi-tier warehouse inventory tracking.

Primary Stakeholders:

- Executive Management Council
- Regional Inventory Specialists
- Data Analytics & Business Units

Functional Requirements

Module Feature	Expected Technical Execution
Data Ingestion	Bulk CSV/Excel historical automated imports.
Dashboarding	Dynamic chart population across KPI filters.
Interactivity	Multi-dimensional category filtering toggles.
Reporting	Automated PDF export capabilities for reviews.
